MetalCloak Upgrades its JK Frame-Built Bumper System

Easier to Install - Frame Modification is a Thing of the Past

Rancho Cordova, CA – The MetalCloak JK Combo Bumper Frame-Built Base is a Bumper and Winch Plate combination that replaces the weak factory plastic bumper with a 3/16 thick steel base that attaches to the real source of Jeep strength, the frame. An upgrade from MetalCloak's original (and much copied) Frame-Built Bumper system, the Combo system does not require any modification to your front bumper – just bolts right on. Like our original system, it still allows you to choose your end caps, hoops, stingers and light bar attachments – all of which tie directly into the Jeep Frame for added strength. Whatever you find on the road or on the trail, the Frame-Built Combo Bumper can handle it. The Combo Bumper Frame-Built Base adapts to the look of your jeep from stock to high clearance tube fenders – it's the perfect bumper to start your Jeep JK build or to finish off a highly modified custom rig. Finished in MetalCloak's signature black powdercoat... MetalCloak, it's Your Jeep, Only Better. Information: MetalCloak, 916-631-8071, www.MetalCloak.com
