Phone: 916-631-8071

MetalCloak Goes Aluminum on the Overlands Popular Overland Fenders for the JK Wrangler Now Lighter than Ever

Diets are All the Rage. And yeah, that even includes Jeeps. With the growing trend towards lighter weight materials for Jeep Wrangler upgrades, MetalCloak, responding to customer requests, now offers their popular Overland one piece JK Wrangler fenders in Light-Weight, Aircraft Grade, Aluminum. Available for the front and rear of your JK Wrangler, the Aluminum Overlands save you over 60 lbs versus the steel variation. Designed for the Overlander or Expedition style Jeep, the Overland fenders provide greater coverage than MetalCloak's signature Overline fenders, while being one-piece and much easier to install. The weight savings is the perfect build option for those distinguished Jeep owners looking to maximize their fuel efficiency for those long cross country treks or just commuting across town. Available in sexy raw aluminum or with MetalCloak's signature black-textured powdercoat, the Aluminum Overlands are one more great offering from the enthusiasts at MetalCloak. When choosing your front flares choose Aluminum Overlands - Make it light, make it strong, make it MetalCloak; It's Your Jeep, Only Better. Information: MetalCloak, 916-631-8071, www.MetalCloak.com
